

Learning Objectives

At the conclusion of this session, participants will be able to:

- Recognize the importance of a Chronic Disease Management approach such as the PRIISME program, in the treatment and management of COPD;
- Identify the extent of the COPD problem in BC and its burden on society compared to other chronic diseases;
- Describe the pathogenesis of COPD in relation to its clinical presentation;
- Apply current and emerging clinical COPD data into practice;
- Understand where clinical practice guidelines fit in the day-to-day management of COPD;
- Develop action plans for managing COPD exacerbations;
- Recognize the range of end of life issues for patients with COPD;
- Recognize the potential roles for non-pharmacological interventions;
- Explain, following a case-based discussion, the practical aspects of spirometry for clinical practice, such as why spirometry is important and how to access it;
- Identify the pros and cons of different delivery systems, and appropriately select the "right device for the right patient".

Proud to provide and promote high quality continuing health education programs, GlaxoSmithKline fully supports the ethical standards of Canada's Research-Based Pharmaceutical Companies (the Rx&D's Code of Marketing Practices).
